PROFESSIONAL SUMMARY

Data Analyst and Machine Learning enthusiast with hands-on experience in Python, SQL, and data analysis. Skilled in building predictive models, NLP-based systems, and interactive dashboards. Strong understanding of data cleaning, feature engineering, and model evaluation to deliver actionable insights and data-driven solutions.

TECHNICAL SKILLS

Languages	Python, SQL (MSSQL), MS Excel
Data / ML	Pandas, NumPy, EDA, Feature Engineering, Statistical Analysis, Regression, Classification, Model Evaluation, CNN, 5-fold CV, RNN, ANN
AI / NLP	LangChain, Transformers, SHAP, GenAI, RAG, TF-IDF, Text Processing, Tokenization, NLP, Prompt Engineering (Basics), Agentic AI pipelines, ChatGpt, Claude, Groq,
BI & VIZ	Power BI, Excel, Matplotlib, Data Visualization, Interactive Dashboards, Streamlit, Matplotlib, Seaborn, PowerQuery
Infra	Git, GitHub, Jupyter Notebook, VS Code, Google Collab, ML Flow, MLOps
Certifications	Data Science intern Certification (oasis Infobyte), Microsoft Power BI certification (intellipaat), SQL Certification (intellipaat)

INTERNSHIP EXPERIENCE

AI Trainee – [Intellipaat](#)

Bangalore • Nov 2025 – Present

- Built end-to-end ML and NLP projects using Python, improving model performance by 15–20%
- Analyzed real-world datasets (5K–20K+ records) with EDA and feature engineering to generate actionable insights

Data Science Intern – [Oasis Infobyte](#)

Remote • Apr – May 2025

- Developed classification and NLP models using Scikit-learn, achieving up to ~90% accuracy
- Performed data preprocessing and visualization to improve data quality and support data-driven decision-making

KEY PROJECTS

Customer Churn Intelligence AI · Python · Scikit-learn · SHAP · Streamlit · [LINK](#)

- **Problem → Solution:** Built an end-to-end ML system on ~100K+ customer records to predict churn and generate actionable retention insights
- **Engineering:** Performed EDA on 15+ features, applied feature engineering & preprocessing pipelines; trained and evaluated multiple models (Logistic Regression, Random Forest); integrated SHAP explainability and deployed via Streamlit with real-time predictions
- **Impact:** Improved churn prediction accuracy by ~18–25% over baseline, enabled early identification of high-risk users, and reduced manual analysis effort by ~60%

RetailIQ AI · Python · XGBoost · TensorFlow · Streamlit · LangChain · FAISS · [LINK](#)

- **Problem → Solution:** Developed an AI-powered retail analytics platform to solve forecasting, recommendation, and insight generation challenges
- **Engineering:** Processed ~1M+ Rossmann sales records; built XGBoost forecasting model, ANN/KNN recommendation engine, CNN (MobileNetV2) for image classification, and RAG-based AI assistant using FAISS + LangChain; integrated all modules into a unified Streamlit app
- **Impact:** Improved demand forecasting accuracy by ~20%, enhanced product recommendation relevance, and reduced decision-making time by ~40% through real-time insights

AI Resume Screening Agent · Python · NLP · Scikit-learn · [LINK](#)

- **Problem → Solution:** Automated resume screening by building an NLP-based candidate ranking system
- **Engineering:** Processed 13+ resumes across PDF/DOCX/TXT formats; implemented TF-IDF + cosine similarity, skill extraction, and weighted scoring model (similarity + skills + experience) with automated ranking & reasoning
- **Impact:** Reduced manual screening time by ~70%, improved shortlisting consistency, and enabled scalable candidate evaluation

E-Commerce Sales Dashboard · SQL · Power BI · [LINK](#)

- **Problem → Solution:** Analyzed large-scale e-commerce data to uncover revenue trends and performance insights
- **Engineering:** Processed ~440K+ records across 5 relational tables; performed SQL-based data analysis and built interactive Power BI dashboards with KPIs, filters, and drill-down capabilities
- **Impact:** Reduced reporting time by ~40%, identified key revenue drop patterns, and improved business visibility across regions and payment methods

Spam Email Classifier · Python · NLP · Scikit-learn · Flask · [LINK](#)

- **Problem → Solution:** Built an NLP-based spam detection system to classify messages in real time
- **Engineering:** Trained model on 5,500+ SMS dataset using TF-IDF vectorization and Naive Bayes classifier; deployed via Flask web app with user input interface
- **Impact:** Achieved ~90–95% precision, reduced false positives, and enabled fast real-time spam filtering

EDUCATION

B.Tech — Computer Science Engineering, Jawahar Lal Nehru College of Technology
Higher Secondary — Govt. Higher Secondary School Shahpur (Vritta), Rewa

2021 –2025 CGPA: 7.95/10
2020 –2021 PER:84%
